

NAVIGATING YOUR SAP ON CLOUD PATH

LIFT & SHIFT TO PUBLIC CLOUD

You require a faster cost-efficient path to a public Cloud data center with minimal changes to your SAP application or as part of a larger migration, but you aren't planning to upgrade to S4/HANA yet. This option is frequently part of a long-term plan to migrate first and upgrade later.

SAP S/4HANA SaaS

You are a smaller organization looking to SAP SaaS migration for the classic benefits of SaaS or you are a large organization looking to incorporate SaaS solutions as part of a larger hybrid deployment.

SAP S/4HANA ON PUBLIC CLOUD

You are a mid-sized to larger SAP estate that wants to benefit from public Cloud but don't see the SaaS solution as a fit. This do-it-yourself option lets you have ultimate control but also comes with greater responsibility.

SAP S/4HANA ON PRIVATE CLOUD

You are a large complex SAP estate that requires different landing zones for aspects of your SAP estate and/or your conservative Cloud mentality.

SAP S/4HANA USING RISE

You aren't ready to consider a SaaS migration but are looking for a bundled subscription option that is closer to SaaS than managing your own public Cloud. This is a common option for mid-sized organizations with moderate complexity that can be managed by an MSP/GSI or other RISE participant.
